

Pic Orientation: Why is my pic sideways?

Last Modified on 03/17/2021 12:18 pm EDT

If you've uploaded a pic and it appears upside-down (or any other orientation) this may be due to your phone's auto rotate feature!

Pics taken with a camera or phone are saved in the orientation they are taken but are presented in the correct manner in the display area. This means the master file is probably the reason why it is detected as being anything but the right side up.

There is an easy solution to this though!

All you have to do is take the pic and upload or edit it using a trusted photo editor. In the editor, just rotate the photo to the correct side (this may mean rotating it on all sides starting from the upright position back to the correct position) and hit or . This should save the file in the correct orientation and will show once uploaded to the site!

If you are still unable to upload the photo in the correct orientation after following the steps above, please feel free to reach out to us at help@manyvids.com and we'll be happy to look into it!
